# Arabic Unicode and Calligraphy

**Nick Doiron - @mapmeld**

# Today I...

## WILL

help you avoid embarrassing errors

explain Arabic / RTL support

show pretty calligraphy

## WILL NOT

teach you Arabic

بيتزاك سلس برس

بيتزاك طيب برين

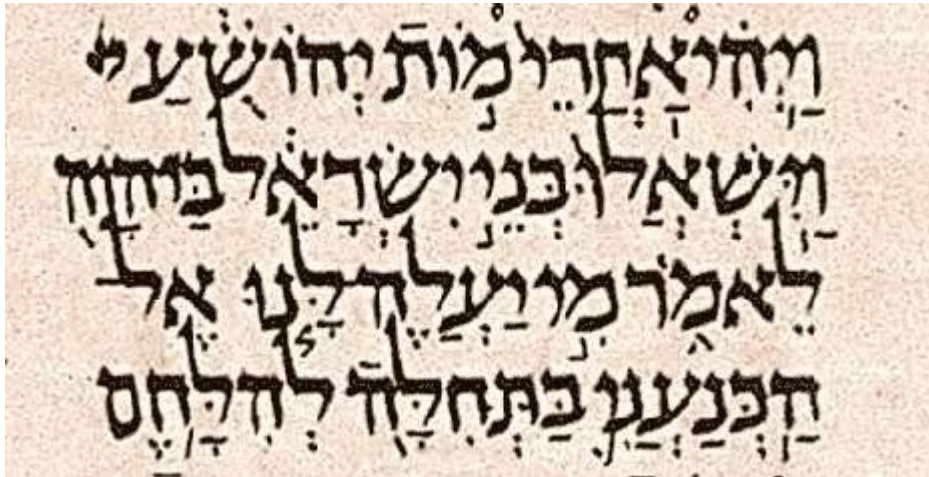

# Right-to-left

Work into internationalization

Also Hebrew, Dhivehi, related languages

NopeNotArabic.Tumblr.com

BESO

هذه باني

BACIO

*But I can't read Arabic...*

- Most letters connect
- Words have spaces
- Check left / right ends

# Most times: Unicode does the work

User types د then ب then ي

They see دبي

Where are the vowels?

يَصِلُ بِأَبَا وَتَوَلَّوْا إِلَى دَارِ الصَّلَاةِ

سَبَقَهُمَا إِلَيْهَا أَطْفَالٌ كَثِيرُونَ وَهَمَّ بِمَرَّهُونَ.

لَوْلَوْ سَعِيدٌ الْآنَ لَأَنَّه يَلْتَقِي أَصْدِقَاءَهُ.

«صَبَّاحُ الْخَيْرِ يَا فَوْفُو»

صَبَّاحُ الْخَيْرِ يَا مَنِي

«بِئْسَ لِلَّعَبِّ مَعَكُمْ»

# Kashida “stretch Arabic”

## A sample workflow for handling bi-di text

1. Determine that content contains RTL text
2. Not Arabic:
  - a. Pair letters + modifiers in 'RTL buffer'
  - b. Read pairs right-to-left
3. Arabic:
  - a. Add letters + modifiers based on position
  - b. Add ligatures

```
if (!arabicRegex.test(inputText)) {
  // Hebrew or Thaana RTL script
  for (var n = 0; n < inputText.length; n++) {
    var c = inputText[n];
    if ((thaanaVowel.test(c) || hebrewSign.test(c)) && rtlBuffer.length) {
      rtlBuffer[rtlBuffer.length - 1] += c;
    } else if (rtlRegex.test(c)) {
      rtlBuffer.push(c);
    } else if (c === ' ' && rtlBuffer.length) {
      // whitespace within RTL text
      rtlBuffer = [rtlBuffer.reverse().join('') + ' '];
    } else {
      // non-RTL character
      ret += rtlBuffer.reverse().join('') + c;
      rtlBuffer = [];
    }
  }
}
```

```
let previous_output = output[output.length - 1];
if (previous_output[FORM] === NOT_SUPPORTED) {
  // not Arabic before this one
  output.push([letter, 'isolated']);
} else if (!(_connects_with_letter_before(letter))) {
  // this letter doesn't try to connect with previous
  output.push([letter, 'isolated']);
} else if (!(_connects_with_letter_after(previous_output[LETTER]))) {
  // previous letter doesn't try to connect to me
  output.push([letter, 'isolated']);
} else if (previous_output[FORM] === 'final' && !_connects_with_letters_before_and_after(previous_output[LETTER])) {
  // previous letter was final and cannot be medial to connect to me
  output.push([letter, 'isolated']);
} else if (previous_output[FORM] == 'isolated') {
  // previous letter was alone - we can change it to be initial of my phrase
  // for now this letter is the final of the phrase
  output[output.length - 1][1] = 'initial';
  output.push([letter, 'final']);
} else {
  // previous letter can be changed to medial
  // this one can be final
  output[output.length - 1][1] = 'medial';
  output.push([letter, 'final']);
}
```

```
for (let x = 0; x < LIGATURES.length; x++) {  
  let ligature = LIGATURES[x];  
  for (let y = 0; y < ligature.matches.length; y++) {  
    let pattern = ligature.matches[y];  
    let textFragment = text;  
    let textFragmentOffset = 0;  
    while (textFragment.indexOf(pattern) > -1) {  
      // determine which ligature form to use  
      let a = textFragment.indexOf(pattern);  
      let start_form = output[a + textFragmentOffset][FORM];  
      let end_form = output[a + textFragmentOffset + pattern.length - 1][FORM];
```
